

# 1- Headings

---

How to give headings in Markdown files? or Types of heading in markdown file.

## Markdown Heading One

---

### Markdown Heading Two

#### Markdown Head Three

#### **Markdown Head Four**

#### **Markdown Head Five**

#### **Markdown Head Six**

```
> # Markdown Heading One
> ## Markdown Heading Two
> ### Markdown Head Three
> #### Markdown Head Four
> ##### Markdown Head Five
> ##### Markdown Head Six
```

## 2- Block of words

---

This is a normal text in markdown

now this is the block of special text.

Press double enter or add \ (reverse slash) at the end of last line to create a separate line below with special text.

```
This is a normal text in markdown
> now this is the block of special text.\
```

## 3- Break Line

---

same technique will be used to break line method.

now this is the second line added without any block or special text

```
> same technique will be used to break line method.  
  
now this is the second line added without any block or special text
```

## 4- Combining of Two different things (i.e., Block of words and headings)

---

heading 2

heading 3

```
> ## heading 2  
> ### heading 3
```

## 5- Face of Text

---

**Bold**

*Italic*

***Bold & Italic***

***Bold & Italic***

***Bold & Italic*** (either you can use asterisk / underscores separately, or both as combined)

```
**Bold**\  
*Italic*\  
***Bold & Italic***\  
__Bold & Italic__\  
**_Bold & Italic_**
```

## 6- Use of Bullets / Points in Lists

---

- Monday
- Tuesday
- Wednesday
- Thursday
- Friday
- Saturday
- Sunay
  - Morning

- Afternoon
- Evening
  - Dinner,
  - Tea/ Coffee,
  - Sleep
    - Dreams, Mind refresh, Healing of Body

Use of numbering (1, 2, 3, 4, 5) in listing

- 1 Monday
- 2 Tuesday
- 3 Wednesday
- 4 Thursday
- 5 Friday
- 6 Saturday
- 7 Sunday

## 7- Line Breaks / Page Breaks

---

At the end of page we have to add period sign (.) then after pressing enter we will add three asterisk (\*) or dashes (-), or underscore signs (\_).

```
***, ---, ___,
```

## 8- Creating of Links or Hyperlinks

---

Just by adding our desired link inside the less than and greater than signs <> we can achieve this.

<https://github.com/Carniverse/Verses>

```
<https://github.com/Carniverse/Verses>
```

how we can make our text clickable.? Well by adding our text in square brackets [add any text inside you want to make clickable] then add the parentheses after square brackets and add your desired link inside it. [You can view my profile by clicking here](https://github.com/Carniverse/Verses)

```
[You can view my profile by clicking here](https://github.com/Carniverse)
```

Now when we have to give our link more than once in our file for that we can give a small name to that link and every time when we click on that defined word it will direct to our given link.

The other profile link to reach me out is [Carniverse](https://github.com/Carniverse)

```
[Carniverse]: https://linkedin.com/in/carniverse
```

The other profile link to reach me out is [Carniverse](#)

## 9- Adding images and Pictures with Links

Whatever picture or image we want to add first we have to bring that in the same folder we currently at. Click and add me on [snapchat](#)

```
[snapchat](qr.jpg)
```

Not even this but you can also add any of your online links to show or redirect the users. [Carniverse](#)

```
[Carniverse](https://www.google.com/search?q=architect+ayaz+ahmed+linkedin&tbm=isch&ved=2ahUKEwiwjt7odv_AhXqmicCHbD8BFoQ2-cCegQIABAA&oq=architect+ayaz+ahmed+linkedin&gs_lcp=CgNpbWcQAzoECCMQJ1CoBFiLDGC1DWgAcAB4AIAB4wOIAcASkgEHMi02LjEuMZgBAKABAAoBC2d3cy13aXotaW1nwAEB&sclient=img&ei=zYqWZPDzIOq1nsEPsPmT0AU&bih=625&biw=1366#imgrc=Ta4RzEe66YbzXM)
```

## 10- Adding Code or Code Blocks

For printing or guiding some specific command just enclosed the command in special sign given before 1 digit of 1 on keyboard just hold shift and press (~) sign.

```
print("Carniverse")
```

For adding block of code just press the same sign thrice before and after the add of desired code.

```
X=7
y=2
z=x+y
print(z)
```

We mostly design this way only when we want to keep our work available for others to use free of cost.

This line will show colour according to Python language syntax and can be changed as per your defined language.

```
X=7
y=2
z=x+y
print(z)
```

## 11- Adding Tables

---

How can we make columns / rows or other tables. Lets create a table of users of different products in different country.

Country	Iphone	Macbook	Dell	Android
USA	7M	3M	1.7M	13M
UK	3M	1M	.7M	5M
India	77M	35M	157M	343M

## 12- Content

---

- 1- Headings
- 2- Bock of Words
- 3- Break Line 4- Combining of Two Different Things
- 5- Face of Text
- 6- Use of Bullets, Points and Lists
- 7- Line Breaks and Page Breaks
- 8- Creating of Links or Hyperlinks
- 9- Adding Images, Pictures with links
- 10- Adding Code or Code Blocks
- 11- Adding Tables

## 13- Install Extensions

---

- Markdown All in One (This will help in adding most of code automatically we used just by right clicking and selecting appropriate option)
- Markdown Shortcuts (Suggesting Shorts while using codes)
- Markdown Preview (Viewing the Markdown on half side of your screen using Visual Studio)
- Markdown Pdf (To view created markdown file in pdf on visula studio)
